FOR IMMEDIATE RELEASE

Insurance Information Services aims to make Missouri roadways safer by launching new driver monitoring program

September 1, 2015 – Missouri residents can look forward to safer roadways with the recent launch of Insurance Information Services' new web-hosted Missouri License Monitor application. This proactive risk-management solution ensures public safety by monitoring driving records and providing employers and insurers with up-to-date information.

Approximately 6 million drivers are licensed in the state of Missouri, and thousands of citations and actions are issued each day. Through continuous electronic monitoring and records management, Missouri License Monitor prevents unlicensed, suspended, or revoked drivers from getting behind the wheel.

Subscribing clients may easily access current information on drivers' non-compliant activity to quickly and assuredly take action before a problem occurs. Participation in this program demonstrates employers' and insurers' commitment to safety and accountability while also resulting in better driver performance.

Insurance Information Services believes that information transparency is the best way for its clients to make informed risk-management decisions and keep dangerous drivers off the road. Missouri License Monitor is an exciting development in pursuit of increased safety and decreased losses.
